

100 Days of Linux - Day 010

Title: Week 1 Practical Workflow & Challenge

Today's Goal

Combine everything learned in Days 1–9 by completing realistic Linux tasks without learning any new commands.

Why This Matters

Real jobs require combining multiple commands to solve tasks. Today's lesson focuses on building confidence through practice.

Commands Covered Today

pwd, ls, clear, cd, mkdir, touch, rm, rmdir, cp, mv, history

Beginner Lesson

Over the past nine days you've learned how to navigate the filesystem, create and remove files and folders, copy and move them, and reuse commands. Today you'll combine these skills into practical workflows similar to everyday development tasks.

Practice Questions

1. Create a directory named `linux_week1`. Inside it create files `app.py`, `notes.txt`, and `data.csv`.
2. Create a backup directory, copy `notes.txt` into it, then rename the copied file to `notes_backup.txt`.
3. Move `data.csv` into the backup directory and verify its contents using `ls`.
4. Delete `app.py`. Then create and remove an empty directory named `temp`.
5. Display your command history and then print your current working directory.

Hints

Break large tasks into smaller steps. Verify each step using `ls` and `pwd`.

Mini Challenge

Create a folder named `project`. Inside it create `python`, `sql`, and `linux` folders. Add one file to each folder, copy one file to another folder, rename another file, remove one temporary file, and finish by running `history`.

Common Mistakes

Trying to complete everything in one command. Focus on correctness before speed.

Did You Know?

Experienced Linux users often chain simple commands together

to automate repetitive tasks.

Pro Tip

After every important operation, use `ls` to confirm the result before continuing.

Answer Key (Instructor Only)

Q1: `mkdir linux_week1 && cd linux_week1 && touch app.py notes.txt data.csv`

Q2: `mkdir backup && cp notes.txt backup/ && mv backup/notes.txt backup/notes_backup.txt`

Q3: `mv data.csv backup/ && ls backup`

Q4: `rm app.py && mkdir temp && rmdir temp`

Q5: `history && pwd`

Homework

Repeat today's workflow without looking at your notes. Aim to complete it smoothly.

Next Day Preview

Tomorrow you'll begin Module 2 by learning how to read file contents using the `cat` command.
