

100 Days of Linux - Day 001

Title: Getting Started with WSL & Your First Linux Commands

Today's Goal

Understand what the Linux terminal is and learn the commands **pwd**, **ls**, and **clear**. Open Ubuntu on WSL and practice using them.

Why This Matters

Software developers, data engineers, DevOps engineers, and cloud engineers work with Linux servers every day. Becoming comfortable with the terminal is an essential skill.

Commands of the Day

pwd

Syntax: pwd

Explanation: Prints the current working directory.

Example: pwd

ls

Syntax: ls

Explanation: Lists files and folders in the current directory.

Example: ls -la

clear

Syntax: clear

Explanation: Clears the terminal screen.

Example: clear

Beginner Lesson

The terminal is a text-based way to communicate with Linux. You type commands and Linux executes them. Today you will only learn how to know where you are, see what is around you, and clear the screen.

Practice Questions

1. Open WSL and display your current working directory.
2. List all files and folders in your current directory.
3. List all files including hidden files.
4. Clear your terminal screen and run the command to show your current directory again.
5. Run the command to list files twice: once normally and once with detailed information.

Hints

Think about which command prints your location. Remember that

adding '-la' shows more details.

Mini Challenge

Open WSL, clear the screen, print your current directory, then list all files including hidden ones.

Common Mistake

Typing commands with incorrect capitalization. Linux commands are case-sensitive.

Did You Know?

Linux powers most cloud servers around the world.

Pro Tip

Use the Up Arrow key to reuse previous commands.

Answer Key (Instructor Only)

Q1: pwd

Shows the current working directory.

Q2: ls

Lists files and folders.

Q3: ls -la

Lists all files including hidden ones with details.

Q4: clear then pwd

Clears the screen and prints the current directory.

Q5: ls then ls -l

Normal list and detailed list.

Homework

Practice today's commands at least five times without looking at your notes.

Next Day Preview

Tomorrow you will learn how to move between folders using cd and how Linux organizes files and directories.
