

100 Days of Linux - Day 004

Title: Creating Files with touch

Today's Goal

Learn how to create empty files using **touch** and organize them inside directories you created earlier.

Why This Matters

Developers and data engineers create files for Python scripts, SQL queries, configuration files, logs, and documentation every day.

Command of the Day: touch

Syntax: touch filename

Explanation: Creates a new empty file if it doesn't exist, or updates the timestamp of an existing file.

Examples:

touch notes.txt

touch app.py query.sql README.md

Beginner Lesson

Yesterday you learned how to create directories using **mkdir**. Today you'll create files inside those directories. Use **ls** to verify files, **pwd** to confirm your location, and **cd** to move between folders.

Practice Questions

1. Go to your linux_practice directory and create an empty file named notes.txt.
2. Create three files named app.py, query.sql, and README.md using a single touch command.
3. List all files in the current directory to verify they were created.
4. Create a new directory named day04 and inside it create a file named practice.txt.
5. Display your current working directory after creating all files.

Hints

Use touch to create files. You can create multiple files with one touch command.

Mini Challenge

Create a directory named project. Inside it create files main.py, data.csv, report.sql, and README.md. Verify everything using ls.

Common Mistakes

Confusing files with directories. Remember: touch creates files,

while mkdir creates directories.

Did You Know?

Most Linux configuration files are simple text files that you can edit later.

Pro Tip

Use meaningful file names such as employees.csv or pipeline.py instead of file1.txt.

Answer Key (Instructor Only)

Q1: cd ~/linux_practice && touch notes.txt

Q2: touch app.py query.sql README.md

Q3: ls

Q4: mkdir day04 && cd day04 && touch practice.txt

Q5: pwd

Homework

Create a folder called practice_files and create at least 10 empty files with different extensions.

Next Day Preview

Tomorrow you'll learn how to view files and understand the difference between files and directories.
