

100 Days of Linux - Day 007

Revision Quiz #1 (Days 1–6)

Today's Goal

Review everything learned so far without introducing any new commands.

Why This Matters

Regular revision helps you remember commands and build confidence using the Linux terminal.

Commands Covered

pwd, ls, clear, cd, mkdir, touch, rm, rmdir, cp

Revision Notes

Before starting the quiz, spend five minutes recalling what each command does without looking at your notes.

Practice Questions (Revision Quiz)

1. Create a directory named `linux_revision`, move into it, and display your current path.
2. Create three empty files named `app.py`, `notes.txt`, and `data.csv`, then list all files including hidden ones.
3. Copy `notes.txt` to `notes_backup.txt` and verify both files exist.
4. Delete `data.csv`, then create an empty directory named `temp` and remove it.
5. Clear the terminal and display your current working directory.

Hints

Think about which commands create folders, create files, copy files, delete files, and print your location.

Mini Challenge

Create a folder named `project`. Inside it create `README.md` and `main.py`, copy `README.md` to `README_backup.md`, delete `main.py`, and finally show the contents of the folder.

Common Mistakes

Rushing through commands without checking results using `ls` or `pwd`.

Did You Know?

Experienced Linux users often combine simple commands into powerful workflows.

Pro Tip

Use the Up Arrow key to quickly repeat and edit previous commands.

Answer Key (Instructor Only)

Q1: `mkdir linux_revision && cd linux_revision && pwd`

Q2: `touch app.py notes.txt data.csv && ls -la`

Q3: `cp notes.txt notes_backup.txt && ls`

Q4: `rm data.csv && mkdir temp && rmdir temp`

Q5: `clear && pwd`

Homework

Without looking at your notes, write down what each command from Days 1–6 does, then verify by practicing them.

Next Day Preview

Tomorrow you'll learn the `mv` command to move and rename files and directories.
