

100 Days of Linux - Day 014

Title: Practical Assignment #1 - Linux Basics & File Viewing

Today's Goal

Apply everything learned in Days 1–13 by completing a realistic hands-on assignment. No new commands are introduced today.

Why This Matters

Real-world work involves combining multiple commands to solve tasks. This assignment reinforces your skills through practical exercises.

Commands Covered

pwd, ls, clear, cd, mkdir, touch, rm, rmdir, cp, mv, history, cat, head, tail

Assignment Instructions

Complete each task in order using Ubuntu on WSL. Verify your work with appropriate commands before moving to the next task.

Practical Assignment (5 Tasks)

1. Create a directory named `linux_assignment1`. Inside it create files `notes.txt`, `tasks.txt`, and `data.csv`. Display your current location.
2. Copy `notes.txt` to `notes_backup.txt`. Rename `tasks.txt` to `todo.txt`. List all files in the directory.
3. Add at least 10 lines of text to `todo.txt`. Display the first 3 lines and the last 3 lines.
4. Create a directory named `archive`. Move `notes_backup.txt` and `data.csv` into `archive`. Verify the contents of `archive`.
5. Display your command history, clear the screen, and finally print your current working directory.

Hints

Break each task into smaller commands. Use `ls`, `pwd`, `cat`, `head`, and `tail` to verify your work.

Mini Challenge

Create a project folder containing `python`, `sql`, and `linux` subfolders. Add one text file to each, copy one file, rename another, move one into a backup folder, then display its contents.

Common Mistakes

Skipping verification after each step. Always check your results before continuing.

Did You Know?

Professional engineers often verify every filesystem change

before running the next command.

Pro Tip

If you forget a command, use the Up Arrow or history instead of retyping everything.

Answer Key (Instructor Only)

Task1: `mkdir linux_assignment1 && cd linux_assignment1 && touch notes.txt tasks.txt data.csv && pwd`

Task2: `cp notes.txt notes_backup.txt && mv tasks.txt todo.txt && ls`

Task3: `head -n 3 todo.txt && tail -n 3 todo.txt`

Task4: `mkdir archive && mv notes_backup.txt data.csv archive/ && ls archive`

Task5: `history && clear && pwd`

Homework

Repeat the entire assignment without looking at the answer key.

Next Day Preview

Tomorrow you'll learn the `less` command for reading large files one screen at a time.
