

100 Days of Linux - Day 100

Title: Final Linux Capstone Challenge & Course Wrap-Up

Congratulations!

You have completed the 100 Days of Linux journey. Over the past 100 days you have learned Linux fundamentals, file management, permissions, users, processes, networking, package management and Bash scripting.

Today's Goal

Apply everything you've learned by completing one final practical challenge.

Capstone Challenge

Build a Bash script called **system_report.sh** that:

1. Displays the current date and time.
2. Prints the logged-in user.
3. Shows the current working directory.
4. Displays disk usage using **df -h**.
5. Displays memory information using **free -h** (if available).
6. Lists the files in the current directory.
7. Asks the user whether to save the report.
8. Uses an **if** statement to save the output into **system_report.txt** if the answer is Yes.

Skills Used

- ✓ Linux commands
- ✓ Variables
- ✓ read
- ✓ Command-line arguments
- ✓ if / else
- ✓ for and while loops
- ✓ File handling

Self-Assessment Checklist

Can you:

- Navigate directories confidently?
- Manage files and permissions?
- Install software?
- Monitor processes and networking?
- Write simple Bash scripts?
- Automate repetitive tasks?

Next Steps

Continue learning Shell scripting, Git, Docker, Python, networking, cloud platforms and Linux system administration. Build small automation projects regularly.

Final Challenge

Improve your script by adding colours, command-line arguments and error handling.

Certificate Message

Congratulations! You successfully completed the **100 Days of Linux** learning journey. Keep practising every day—consistency is the key to mastery.

Thank You

The end of this course is the beginning of your Linux journey. Keep exploring, keep building and keep learning. Happy coding!
